

ASTAR HEALTH SERVICE · RECORDED SUPPORT SUMMARY · DEMONSTRATION (SYNTHETIC)

Demo Participant (synthetic) · Wednesday 12 August 2026 to Tuesday 8 September 2026

Draft · prepared by Admin, not finalised

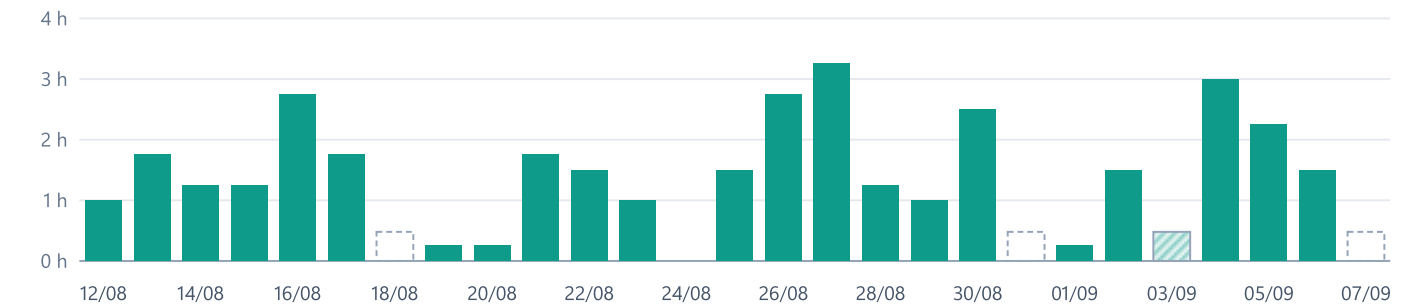

Version metrics-v3+20260909142517 · exported Wednesday 9 September 2026 · times Australia/Melbourne

28 rostered nights · 23 logged · 1 partial · 3 not recorded · 1 not yet finished · 54 completed shifts, 27 with a note · 1 in progress · 28 days

Falls recorded 5 falls 5 incident reports in period	Near misses recorded 3 near misses 3 days with a record	Assisted transfers recorded 229 transfers 24 of 24 care logs answered
Incidents involving an emergency call 1 of 5 attendance is not recorded on the form	Average recorded overnight assistance 1.53 h per night 23 of 27 nights in scope	Nights with complete overnight data 23 of 27 in scope 1 partial · 3 not recorded · 1 not yet finished

Overnight assistance per night

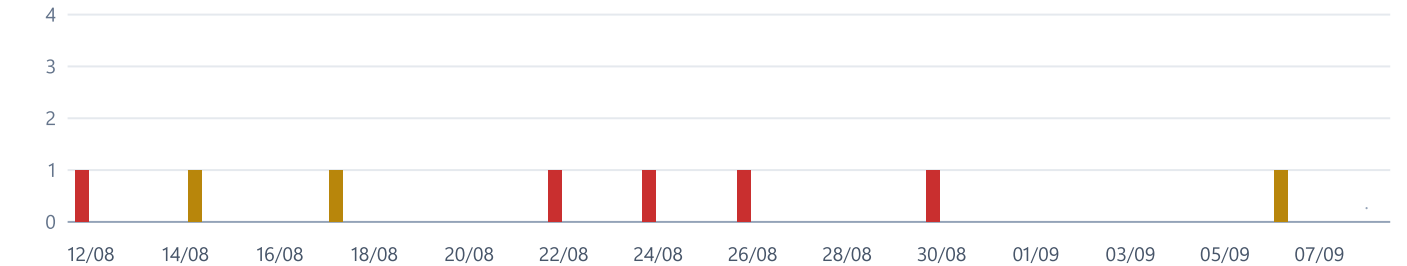

Hours of recorded worker assistance inside 23:00–07:00. Hatched = partial, dashed = not recorded.

n = 23 nights with a value of 27 in scope · 3 not recorded · average 1.53 h

Falls and near misses over time

Recorded events per day. No bar = no recorded event.

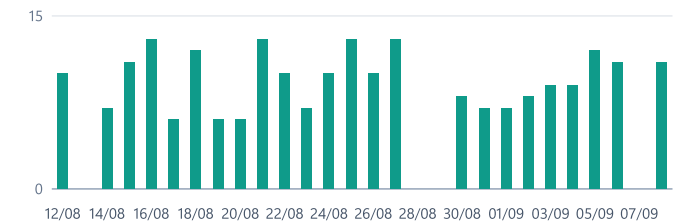

Falls Near misses

5 falls · 3 near misses · 54 completed shifts, 27 with a note

Transfers and personal care

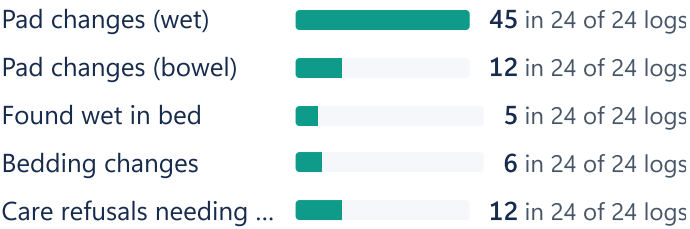

Structured counts from the personal care log; totals are over the logs that answered.

Assisted transfers per day

229 transfers · 24 of 24 care logs answered

Care measures

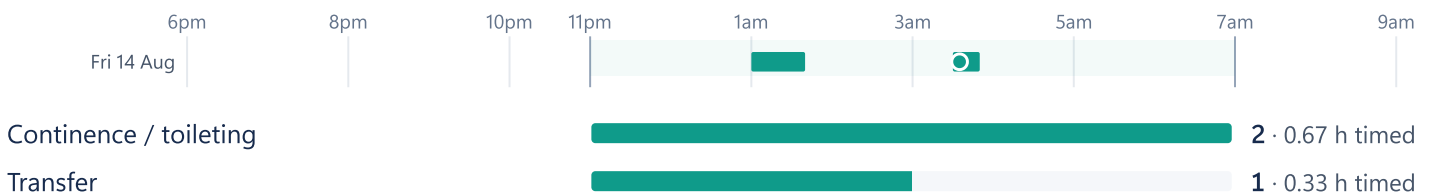

Overnight detail

One row per night the shift started. Wakes exclude the final wake.

Definitions (metrics-v3)

Term	Definition
Period and timezone	Dates and times are the participant's service-local time (Australia/Melbourne) as entered by the worker. A night is labelled by the date its sleepover shift started and runs to 07:00 the next morning. Events after midnight belong to the night that started the evening before.
Scope	A shift is in scope when its rostered end time has passed. Shifts still running or not yet started are shown separately and never counted as "not recorded".
Recorded, partial, not recorded	Recorded = a structured record exists with the measure filled in. Partial = a record exists but the measure is blank, or only reviewed observations exist for that night. Not recorded = no record. Partial and not-recorded items are excluded from averages and never shown as 0.
Counted once	A fall or near miss that appears in an incident report and again in a note or document is one event: the structured record is counted; the review links the repeat to it. Reviewed observations with no structured record are counted as their own event. Look-alikes on the same date within 30 minutes are listed for review, not merged.
Overnight assistance duration	From the overnight summary: the X-coded 15-minute blocks of the paper sleep log inside 23:00–07:00 (elapsed time the worker was assisting). Where a night has no summary but has reviewed observations with start and end times, the merged elapsed time of those intervals is shown and the night is marked partial. Overlapping intervals are merged. Awake-without-assistance is shown only when the whole 23:00–07:00 window is accounted for (asleep + assistance recorded), and the window length is taken from the actual clock times, so a daylight-saving night is 7 or 9 hours, not 8.
Wakes	The overnight summary's wake count is the number of times the participant woke needing support BEFORE the wake they got up for the day. The final wake is not included. A wake is not the same as an assistance episode; one wake can involve several activities.

Term	Definition
Assisted transfers	From the personal care log's structured count. On a day with no care log, individually reviewed transfer observations are counted instead; the same day is never counted from both. Mentions of a wheelchair in prose are not transfers.
Care measures	Total and per-day are computed only over the logs that answered that measure; per-day divides by the number of days with that measure recorded. Logs saved before 7 September 2026 stored blank answers as 0 and are listed under checks.
Showers	"Offered" is what the worker recorded. "Done" and "declined" are recorded answers; a shower recorded as offered with no completion answer is shown as "outcome not recorded", not as declined.
Incidents	Falls are incidents the worker recorded as a fall. "Involving an emergency call" counts incidents where any emergency service was recorded as called; the form does not record how many calls or whether the service attended. Injuries: the worker's answer; no answer = unknown. Minutes on the floor are only summed where recorded and are the time before being helped up, not a waiting time.
Locations and activities	Location is where the record says it happened. Whether a transfer was in progress is the worker's answer to that question; for records made before the question existed (before 9 September 2026) a transfer is inferred only when the recorded location itself names a transfer, and those rows are marked as inferred.
Excluded material	Sources marked excluded (training samples, generated examples) and observations that are proposed or rejected never enter any figure. Demonstration mode uses an entirely synthetic participant.
